Some of the most interesting discov-Professor Cope in paleontological researches among the bad lands of Colorado. The remains in the bad lands of Colorado are even more interesting than in the simular regions of Wyoming. They have been found to be a vast gravevard of animals belonging to a long past period of earth's existence. Up to the present time, Professor Cope has proven the existence of more than 100 speciess represented by thousands of individuals. Of these, at least seventy are new to science." They range from the size of the mole to nearly that of the elephant. Sixteen species are reptiles. Many forms of insectiverous animals, related to the mole, and of The dellicacy and minnuteness of these fossils is surprising. Gnawing animals, eighteen species, some no larger than the domestic mouse. Some were the had no horns. They were about as large sheep. Others were about the size of obtained. Their relatives, the rhinoce ros, abounded in Colorado in former been procured by Professor Cope. One. of the specimens is a perfect skull, with teeth complete, and covered with the moss-like crystilization seen in the mossagate. But the most remarkable monbeen disclosed by this summer's survey are a series of horned species related features in which, according to Professor Cope, they resemble the clephant, short feet, but possessed osseons horns, in pairs, on different parts of the head. size than the last, had rudimental horns presence of horns in pairs is an indica-In the last few years Professor Cope lake deposits of Kansas, Colorado, Wv-

A European View of the Panic.

It appears only prudent to calculate that the most important ultimate effect of the cricis will be the abolition of the moonvertible currency in America, and a return to a bullion basis there in some form or other. The change would be a most difficult one, but Americans are accustomed to sudden economic changes which would appal other countries, and we must not certainly conclude that they will be deterred by the difficulties. There is fair reason to apprehend, in

short, that the present American crisis may only be the commencement of a new stage in that appreciation of the gold currencies of the world which we believe to have commenced with the steps taken in Germany to introduce a single gold standard. We see in America what a great shock has just ensued, according to good authorities, from the increasing scarcity of a currency, and a similar process applied during the cext two years to all the gold-using countries will most probably be fruitful of difficalties. Que count, in ordinary cirat her exposed ST sawgold from another,

Save Your Seed Cern Now

One great evil in seeding time is, that when all is ready for planting, and the farmer goes to his crib to pick out his seed, he suddenly becomes suspicious that it will not grow. Nevertheless, the field cannot wait; the best is selected and planted, and he trusts to luck. This class of farmers generally blame the cold season, worms, gophers, mice, birds and many other things that are re-Jules Favre and Gambetta. The first ally more innocent than they are usual ly supposed to be.

When corn ripens upon the stalk perfectly, before the advent of frosty nights, and is thereafter placed in narfiance about not surrendering a foot of row cribs, secure from wet, it will certainly grow, if properly planted in the sians, and the breaking down and weep- proper season; but this perfect ripening does not usually occur. The seasons of 1871 and 1872 have been rethey covered him with reproaches and markable for the perfect ripening of corn throughout the west. Consequently there have been no complaints his pleading before the courts, where about corn rofting in the ground when betta has not lost character like Favre, a vast amount of the corn raised in the west is imperfectly ripened. That is, there is more or less soft and shriveled commune to the late elections, an ad- trust to such seed. Indeed, we know mirable discretion, but committed a many good framers who keep one-yearemergencies. It is perfectly safe to plant it three years old, if properly readily as new seed.

It is better, however, that seed be saved every year. A good time to do this is while husking. Whenever you come across an exceptionally good car, instead of husking, break it with the epoch as well as any man living when busk remaining. In unloading, these the impatience of Gambetta, in thrust- unbusked cars may be thrown aside, ing forward his crude men, some of and at any convenient time, tied toof the commune, alarmed those who had dry, airy situation; or, better, braid something to stake in the country, and them into strings, and hang them in the erate smoke. Served in this way they not only germinate surely but quickly,

Flint, or, as it is called, Yankee corn, begins to dry first in the grain. With is the case. These commence drying at the cob; hence, the grain of the first ally no such thing as death, the term is is plump and round, and that of the latter is long and indented. Hence also, flint corn may be cut and shocked much greener, comparatively, than the western varieties. For this reason, the the creator himself. When God made seed of the flint varieties is surer to life, He made everything necessary to grow when husked from the shock than the dent varieties, for the reason that, more shallow, it is not so easily injured in the germ as the dent.

In saving seed corn, select the upper ear if there be two good ones on the singular one; he strides the left and the and you have a surplus, you need have

> One more thing is worthy of mention in relation to seed-corn. When once, by care and attention, you have secured do not be in haste to change your seed Experiment as much as you please, but hold fast to that which is good nutil you get a better. - Western Rural,

A wirry scientist once silenced a London fish-woman, who was pouring out at her, in emphatic tones, the language of palicontology, thus, "You ichthyosaurus, you pterodactyl, I'll feed you on cephalopods, and saurians shall consume your parietals," In blank silence the woman stared at her enemy, and did not utter a word in reply.

which make seventy years a burden.

SWEENBY REMEDY.-An Indianian says he has cared a valuable horse in or five inches long; fill it with salt; sew the end up; take a bucket with some water in it; dip in the bag with salt; now double up your shirt sleeves, and rub the sunken part for fifteen or twenty minutes. Rub freely, occasionally pulling the skin so as to loosen it after rubbing. Grease it ; fresh butter is best, although other grease will do. Rub it in also. By so doing several mornings successively, no doubt the mare will get well. It will take two or three months for the sunken part to grow out even with the other parts. If the hair rubs off, it will grow again.
